

X's & O's

This is a game for two players.

Materials: Coordinate plane, word list, colored pencils, word cards and instructions.

This is like tic tac toe, except you must get four x's or O's in a straight line. Players take turns picking a card from the pile. They match the graph on the card to it's name on the word list. Then they mark an X or an O on the coordinate that matches the graph on their card. The first player to get four X's or O's in a straight line is the winner. If "Cat" (No one) wins the game, play again.

- Once you match a graph to it's name, you cannot change it.
- If a coordinate is marked incorrectly or a graph and it's name are mismatched, the player loses a turn.
