

Hello,

This REALLY looks Cool! If you are interested in being chosen for a ride on the "vomit comet" check out the link below! You must be a middle school teacher or a pre-service teacher to apply.

The Northrop Grumman Foundation is now accepting teacher applications for the 2008 Weightless Flights of Discovery program, an initiative that places teachers on micro- and zero-gravity flights to test Newton's Laws of Motion and energize students in the formative middle school years.

The Foundation has selected four locations for this year's flights, including Atlanta on **October 7**. A maximum of 60 teachers will participate in the Atlanta flight. To learn more about Northrop Grumman Foundation Weightless Flights of Discovery visit [www.northropgrumman.com/teachers](http://www.northropgrumman.com/teachers)

Middle school math and science teachers are welcome to apply to participate in the October 7 flight at [www.northropgrumman.com/teachers](http://www.northropgrumman.com/teachers).

Please forward this message to your middle school math and science teachers and encourage them to apply for this wonderful opportunity!

Good luck!

---
